Color Q Reagent Refill Data Sheet

LaMotte make over 2,000 different testing reagents in various sizes. By the time we receive testing reagents and sell the products to our customers a portion of the shelf-life passes. It is our goal to provide the longest shelf-life possible, but through storage and shipping from the USA, it is not possible to provide all products during their first weeks of production.

On the lower, left corner of the label of each LaMotte reagent is a six or seven digit number. This is not a code number, but the lot number of that reagent. A lot number records the date of manufacture and identifies the reagent as part of a specific batch of reagent produced on that date. The first two digits of the lot number identify the week, and the third digit identifies the year of manufacture.

E.g. A reagent (6740G) with a lot number of 252717 was manufactured the 25th week of the year 2012 and has a shelf life of 2 years, so therefore will last until week 25 of year 2014

Reagent Refills - 30mil Bottles
